

MainWP WordPress Plugin Overview

Tagline: Open Source, Self-Hosted WordPress Management Suite

Description: MainWP is a self-hosted WordPress management suite capable of performing the daily administrative tasks for multiple WordPress sites from a single location even if the sites are hosted on different servers.

How it works: The MainWP WordPress Suite consists of 2 plugins:

- The MainWP Dashboard Plugin gets installed on 1 self-hosted WordPress site. This is where the administrator works with their network.
- The Child Plugin is installed on all the WordPress sites the administrator wants to manage. These sites are then securely managed from the Dashboard Plugin.

MainWP is a WordPress management suite developed to be the most effective, self-hosted WordPress central dashboard.

From the MainWP dashboard a user can control virtually all aspects of WordPress management including updating all of their sites with just one click of a button, schedule automated backups, monitor their sites for downtime, manage content across their network and much more.

The MainWP Plugins are available in the WordPress Repository.
